 Inderscience Submissions - article submissions and peer-review system

Dear Mr. Anandkumar Pardeshi (and co-authors, if applicable),

We have now completed the reviewing process of your article IJADS-312370 entitled "From Signal Fusion to Asset Allocation: A Decision-Theoretic Model for Portfolio Construction Under Regime-Based Sentiment and Volatility" submitted to the Int. J. of Applied Decision Sciences

We are pleased to say that we consider it a good candidate for publication, once a number of revisions are made.

Please read the reviewers' recommendations listed below and revise your article in light of their comments.

To help the reviewers check that you have made the required corrections, please insert at the beginning of your revised article a detailed response to the reviewers' recommendations. Make sure you address each recommendation thoroughly and methodically. You should also show where the reviewers can find your change in the revised article by referring to the page number and preferably highlighting the updated text.

When revising your article please ensure that your reference list is up to date and that any recent articles, including those from IJADS, which are of relevance to your article are included. Having a broad and up to date reference list is vital to the quality of an article, and very useful to the readership.

You will need to upload your revised article to our submissions system. The editor and the reviewers will then re-review your article.

Please be reassured that only very few submissions are accepted without requiring some revision.

We look forward to receiving your resubmission within the next 30 days.

Please do not use the 'Reply' function with this email - we will not receive your message.

Kind regards,
Prof. Madjid Tavana
Int. J. of Applied Decision Sciences

Reviewers' Comments to Author

REVIEWER 1 (Offline Reviewer)

Review date: 21 Aug 2026

MANUSCRIPT FEATURES

Originality of the work: Acceptable

Subject relevance: Acceptable

Professional/industrial relevance: Acceptable

Completeness of the work: Acceptable

Acknowledgement of the work of others by references: Marginal

Organisation of the manuscript: Acceptable

Clarity in writing tables graphs and illustrations: Acceptable

Likelihood of passing the 'test of time': Acceptable

QUALITY AND RIGOUR

Have you checked the equations and/or statistics? (if applicable): yes

Are you aware of prior publication or presentation of this work?: no

Is the manuscript free of commercialism?: yes

Is the article too long?: no

RECOMMENDATION: Acceptable with major revisions

REVIEW COMMENTS:

Changes which must be made before publication:

. Please fix your literature review. A typical academic paper should have around 45.45 academic

references with about 10 relevant references published in ACADEMIC JOURNALS in 2025 and 2026. Remove all self.citations and limit them to no more than 2.3 references. References should be recent, directly relevant to the study, complete with full bibliographic information, and drawn primarily from scholarly journals in analytics and related fields rather than conference proceedings, professional magazines, trade publications, or other non.scholarly sources. Please avoid excessive citations to a single journal, including our own, or to a single author. As a general guideline, no more than three citations should be attributed to the same journal or author. In addition, please avoid citing references in clusters of more than three at a time.

. The paper has some serious acronym.related problems. You cannot assume the reviewers or readers are familiar with the acronyms you have used in your paper. You need to expand an acronym once in the abstract upon the first use and once in the body of your manuscript upon the first use. Remember, acronym overuse reduces readability.

. Please carefully polish and clean up all figures and tables. All figures and tables in a paper must be consistent. Please make sure all figures are high.resolution (300 dpi).

Suggestions which would improve the quality of the article but are not essential for publication:

.

MANUSCRIPT FEATURES

Originality of the work: Good

Subject relevance: Good

Professional/industrial relevance: Good

Completeness of the work: Marginal

Acknowledgement of the work of others by references: Good

Organisation of the manuscript: Acceptable

Clarity in writing tables graphs and illustrations: Marginal

Likelihood of passing the 'test of time': Acceptable

QUALITY AND RIGOUR

Have you checked the equations and/or statistics? (if applicable): yes

Are you aware of prior publication or presentation of this work?: no

Is the manuscript free of commercialism?: yes

Is the article too long?: no

RECOMMENDATION: Acceptable with major revisions

REVIEW COMMENTS:

Changes which must be made before publication:

1. The manuscript has good potential, but several important improvements are needed before publication. The methodology should be explained more clearly so that other researchers can understand and reproduce the work.
2. more implementation details are needed, particularly regarding the data sources used, sampling frequency, sentiment analysis model, feature extraction process, Gaussian Mixture Model settings, and the optimization solver applied.
3. The experimental results also need stronger statistical support. Although improvements in Sharpe ratio and drawdown are reported, the manuscript would benefit from including statistical significance tests, confidence intervals, robustness checks using different rolling windows, turnover statistics, and sensitivity analysis to strengthen the reliability of the findings.
4. The portfolio allocation results require further clarification. In Figure 5, the portfolio appears concentrated in only a few assets during certain periods, which does not fully align with the described risk.budgeting approach. This behaviour should be explained more clearly.
5. The regime detection section also needs stronger justification. The choice of three market regimes should be supported using model selection measures such as AIC, BIC, or regime persistence statistics.
6. In addition, the language and presentation require careful revision. There are grammatical inconsistencies, sudden changes in writing style, and some unfinished formatting elements, including incomplete AI declaration text.

7. Finally, the equations should be explained in greater detail, with clear definitions of all parameters and constraints used in the optimization model.

Suggestions which would improve the quality of the article but are not essential for publication:

1. The literature review can be strengthened by adding sharper critical comparison between the proposed framework and recent portfolio allocation models.
2. Figures would benefit from more technical interpretation, especially regime transitions, signal confidence behaviour, allocation stability.
3. The sentiment.analysis section may be improved by explicitly stating whether domain.specific transformer models or lexicon.based methods were used.
4. Future work may include cross.market validation, larger asset universes, reinforcement learning.based adaptive parameter tuning.
5. The manuscript would benefit from minor restructuring to reduce repetition in Sections 4.2 and 4.3.

*** End of reviewer comments ***

Guidelines for submitting your revised article:

1) To help the reviewers check that you have made the required corrections, please insert at the beginning of your revised article a detailed response to the reviewers' recommendations. Make sure you address each recommendation thoroughly and methodically. You should also show where the reviewers can find your change in the revised article by referring to the page number and preferably highlighting the updated text.

2) To upload your revised version, please:

Log in at <https://indersciencesubmissions.com/>

(you can get username and password reminders there)

Go to the 'Track progress of your article and submit revisions' section.

Locate your article and download the original submission file.

Make your changes as required and then click on 'Choose file' to select your revised document and then click 'Upload'.

3) By clicking on "Author/Editor Communication" you can read the reviewers' comments and any annotated files.
